TECHNICAL SKILLS

Training & Documentation: Technical Training for Non-Technical Audiences, 1-on-1 & Group Coaching, SOP/User Guide Development, Internal Knowledge Base Management, Presentation Design

Data & Technical Processing: SQL/PostgreSQL, Data Processing & Metadata Handling, Quality Control & Documentation Trails, Network & Traffic Diagnostics (TCP/IP, Wireshark)

Additional Technical: Python, Java, ServiceNow/ITSM, Jira/Google Suite, Google Technical Support Certificate

WORK EXPERIENCE

Acs International Resources (Inspiroz)

Jan 2026 – Current

School Technology Specialist

New York City, NY

- Deliver on-site and remote technical support and end-user training across multiple school environments, managing devices and user access via Microsoft Intune and Microsoft Azure.
- Lead end-user training and create clear documentation to improve system adoption and reduce repeat support requests.
- Manage service requests through ServiceNow, coordinating across stakeholders to ensure SLA compliance and maintain accurate documentation trails.

Success Academy Charter School

Jul 2025 – Jan 2026

STEM Problem Solving Teacher

Brooklyn, NY

- Collected and analyzed performance data from exams, quizzes, and assignments across each classroom to identify learning gaps and adjust instruction accordingly.
- Made engaging slides for 35 students per class across 4 different classrooms, encompassing topics of logic-based mathematics and problem-solving strategies, guiding students to approach complex problems by using systematic reasoning and persistence.

University of Richmond — Short-Term Contract

Dec 2024 – Apr 2025

Technical Trainer — Computational Chemistry Machine Learning

Richmond, VA

- Trained Post-Baccalaureate researchers on a Python/LLM-driven research tool through presentations, group sessions, and 1-on-1 coaching — translating technical functionality into workflows non-technical users could adopt confidently.
- Created and continuously improved SOPs, FAQs, troubleshooting guides, and internal knowledge bases to standardize processes and reduce reliance on ad hoc support.
- Owned the technical lifecycle of hardware computer lab systems, coordinating maintenance and access across a shared research environment.

The Exploration School Summer Program — Summer Employment

Jun 2022 – Aug 2024

IT Coordinator / AV Coordinator

Bronxville, NY

- Delivered Tier 2/3 technical support using Windows CLI and task manager-based diagnostics.
- Configured and secured network connectivity for 100+ endpoints (iPads, phones, laptops, VOIP handsets) using NEC Univerge Blue, managing access across a high-density, high-turnover environment.
- Managed integrated building systems (Crestron touch panels, AV distribution, lighting/control systems) requiring coordination across multiple technical subsystems.

TECHNICAL INVESTIGATION PROJECT

Network Traffic Analysis | <https://github.com/Markplowright/network-traffic-analysis-wireshark>

- Built a structured, repeatable investigation workflow (capture strategy, filter selection, hypothesis testing, validation) to trace and document abnormal connection behavior across TCP, DNS, FTP, HTTP, and SSH traffic.

ADDITIONAL EXPERIENCE

GradAisle

Apr 2025 – Present

Co-Founder

[GradAisle.com](#)

Free graduate school discovery and matching platform for U.S. Master's/PhD applicants, including international/F-1 students. Aggregates program-level data: tuition, CPT/OPT eligibility, STEM OPT status, TA/RA funding that is otherwise scattered across individual university PDFs, letting students search and compare 1,000+ programs in one place.

- Identified that program-level CPT/OPT/visa/funding data was fragmented across thousands of unstructured university PDFs, then built an AI-assisted extraction pipeline to parse that data into a structured, queryable PostgreSQL schema.
- Contacted and built working relationships with university admissions offices (Syracuse University and Fordham Gabelli) to verify program data accuracy and gather requirements directly from source contacts.
- Led cross-functional technical planning across a 3-person distributed team, running structured biweekly syncs to sequence a multi-phase platform rebuild with dependency-aware prioritization.
- Designed and queried the PostgreSQL database schema and metadata structure powering a 1,000+ program dataset, writing SQL to support search, filtering, and matching across tuition, CPT/OPT, and funding fields.
- Built and shipped the core platform end-to-end (Next.js 14, Supabase/Postgres, Redis), including the matching logic and the deployment pipeline on a self-hosted VPS (Dokploy, Traefik).

EDUCATION

Methodist University

Jan 2021 – Dec 2024

B.S. Computer Information Technology — Cyber Security & Information Assurance Concentration

Fayetteville, NC
